DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- I. Figures 1(a) and 1(b)
- II. Figures 1(c) and 1(d)
- III. Figures 1(e) and 1(f)

Should Applicant chose one of the above species, the Applicant can optionally select the following sub-species: A. Figure 6

- IV. Figures 2 and 7
- V. Figures 3 and 8
- VI. Figures 4 and 9
- VII. Figures 5 and 10

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims

Art Unit: 3754

subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Claims 1-6,9,10 correspond to one of the following species: I, II, III

Claim 7 corresponds to one of the following species: II or III

Claim 8 corresponds to species: II

Claim 11-13 corresponds to one of the following species: IV, V, VI, VII

Claims 14-16 correspond to one of the following species: IV or V

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species I is threaded and Species II and III are press fit, which limits the amount the combinations that can be made between the different species including the different dispensing assemblies with the plates. Also not every plate has a retaining means and protrusions and/or lugs. Furthermore only species II and III can allow for one or more opening sizes and/or at least three discrete opening sizes over a large range.
